

Amanda's Notes for Olivia:

- get rid of the footnotes from wikipedia in the text
- maybe make the history section one column with photos in the second column instead of below the section (same for influence section)
- play with the idea of all dividers being the same color or different colors or alternating colors
- change the top of the page (origin) to have a more distinct intro and title before getting to the origin section
- fix photo placement in origin section so it makes sense with the grid of the layout
- make button on opener page transparent pink hover like the hover in the categories section
