Fantastic Mr. Fox

- Have the enter button in the home page move into focus when hover over
- Be able to link back to the opening page, maybe by clicking "Fantastic Mr. Fox"
- Make the images the same size in the scroll bar, and have the scroll fill the page horizontally, where on either side one can see a blurry/opaque image of what was before and is next. You showed me a cool example website.
- If cannot make the scroll picture bar, then make the images larger than what you have now, so they fill more of the screen.
- Make text box longer
- Move text—cut off more on right
- Add source page
- Remember about dots under images—same number as images
- For responsive, keep the image scroll and text underneath format.
