HTML Review Notes

Index
- Looks great!
- Mentioned making the logo transition to a lower opacity on hover

Introduction
- Get rid of scroll bar on body text – can just be a continuous block
- Consider top-aligning the text and video

Characters
- Will make it so the character descriptions appear over the image on hover
- Add a form of visual navigation that lets the user know they can scroll between the images
- On mobile, you will probaby just want to have a one-column, picture-text, picture-text, etc. layout (since you wont have the hover functionality)

Seasons
- Charset

Background
- Scrollbar

General
- Switch to simple one-column, stacked layout on mobile
- Consider how the navbar will appear on mobile – perhaps increase logo size (from how it is at mobile now) and stack the tabs or add in a hamburger menu
