Impossible Color Website

The website will be built as multiple pages, with a sidebar of expanding tabs to stack the information. I may try to use pop ups to display images that are usable as optical illusions to see some of the the impossible colors as well as extra info about that particular color.

1. Home page: Brief description of what an impossible color is and why they exist
 - Opponent processing color theory
 - Types of impossible color
2. Real colors: What makes them “real”
3. Reddish-green and blueish-yellow (Not sure how to categorize these?)
 - include images
4. Imaginary colors
 - Description, uses, examples. Can’t really be “illustrated” but include some imagery.
 - ie. Hyper-green
5. Chimerical Colors
 - Stygian colors
 - Self luminous colors
 - Hyperbolic colors
 - Include images
6. Sources
