Designer: Kristen DeMondo

Welcome To Ukraine Microsite

- < During the initial meeting we have narrowed down the look of the site and created basic sketches of the wireframes. We will create a home page with main image banner and three Feature sections. Additional two pages will contain the info about the top attractions of the country and relevant travel info.
- < We have determined the color palette and typography system.
- < The photographs to be used in the projects have been collected and shared.
- < We have determined that the main goal of the website is to celebrate Ukraine's cultural heritage and geography, as well as to attract travellers from around the world. The overall feel is intended to be inviting and positive achieved through use of imagery and color palette.
- < The site will have responsive qualities with content being adjusted appropriate to the media size.
- < Custom logo and branding system will be used in creating the website.
- < To ensure cohesive look of the site we plan on creating custom vector graphics to work as elements of the established brand.
